

Assignment 2

1. Simplify the following Boolean functions using Boolean algebra
 - I. $F(x, y, z) = \sum(0, 2, 3, 4, 6, 7)$
 - II. $(A+B)(A'+C+D+E')B'+(A'+B)'$
2. Given this function: $(A+B)+(A'B')'+C$
 - I. Build the function using NAND Gates only
 - II. Find out the complement of the function
3. Find out the SOP and POS of the following function (Can't use truth table)
 - I. $F(A, B, C, D) = A'B+C$
